Dragon's Boot

- User Manual

1. What is it?

This program is a bootable USB Setup All-In-One. This very small executable does everything for you, with a simple and intuitive user interface, all in under 30 seconds! It's a great time saver if you want to make bootable drives for your friends or just make extra copies for yourself in no time!

2. Features

- **MBR Formatting**
  This information includes where partitions start and begin, so your operating system knows which sectors belong to each partition and which partition is bootable.

- **Grub4Dos installer**
  Grub4DOS is a boot manager that can be easily installed to a flashdrive or hard drive (internal or external). It allows booting multiple operating systems directly as well as booting into bootable partitions.

- **QEMU Virtual Machine Testing**
  QEMU is a generic and open source machine emulator and virtualizer.

3. Instructions

Formatting
1. Insert the USB device.
2. Select the USB device from the dropdown list.
3. Select formatting options.
4. Click on *Format Drive.*

QEMU
1. Select the USB device from the dropdown list.
2. Click *Run on Virtual Machine.*

4. Warnings

1. If you chose to repartition the drive all the information on the drive will be permanently deleted; if you don't select it, data will not be lost but it's a good idea to keep a back up of your data.
2. You can chose to format internal drives but be very careful when you do so. Use this option if you want to format a hot plug device or an external hard drive.
